Yumna Waris

Software Engineer II at PayEngine | Fintech Systems | Microservices
& Event-Driven Systems | Silver Medalist | Exploring AI/ML & Agents
Bamberg, Bavaria, Germany

Summary

Passionate Software Engineer with a strong foundation in building data-intensive and scalable systems, particularly in the payment technology domain. I bring hands-on experience in designing secure, event-driven architectures and leading impactful projects that merge software engineering with intelligent decision-making. Recognized for problem-solving and innovation (Hackathon Winner 2022), I thrive in collaborative, research-oriented environments. My goal is to advance expertise in intelligent software systems and contribute to developing next-generation AI-driven solutions with global impact.

Experience

PayEngine

3 years 7 months

Software Engineer II

July 2023 - Present (3 years 2 months)

Santa Monica, CA

- Designed and shipped end-to-end fintech features from frontend to backend services, REST APIs and Databases, supporting 50,000+ merchants and 100M+ transactions/month.

- Built scalable microservices and event-driven workflows for merchant onboarding, underwriting, payment processing, and processor management.

- Automated merchant onboarding, reducing processing time from hours to minutes and significantly lowering manual operational effort.

- Engineered fraud-monitoring, transaction-monitoring, and underwriting workflows integrating by which reducing manual fraud review by 70%, auto-approving 70% of applications, and cutting decision time from 3 days to 4 hours.

- Delivered an end-to-end Payment integration covering Web Drop-in tokenization, digital wallets, and backend payment processing.
- Implemented PCI-aligned card security across many payment flows.
- Built subscription and billing capabilities including Payment API integrations, supporting 100,000+ active subscriptions.
- Developed API-driven and agentic automation workflows with external services, reducing manual processing effort by 60%.

Software Developer Intern

February 2023 - July 2023 (6 months)

Santa Monica, CA

- Gained hands-on experience developing and maintaining features within a production payments platform, building a strong foundation in frontend, backend, and payment-system engineering.
- Assisted with debugging and resolving application issues, helping improve system reliability while gaining familiarity with existing codebases, workflows, and production-level engineering practices.
- Developed and enhanced UI components for improving usability and contributing to a smoother customer payment experience.
- Collaborated closely with senior engineers through pair programming, code reviews, and feature development, strengthening software engineering, debugging, and teamwork skills.
- Worked on Amazon QuickSight dashboard integrations, helping surface platform and operational data for reporting and analytics.
- Contributed to the implementation of a subscription module for partners, expanding the platform's support for recurring payments and subscription-based use cases.
- Worked within a microservices-based architecture and gained practical experience with application services, databases, cloud infrastructure, and containerized development environments.

Education

Otto-Friedrich-Universität Bamberg

Master of Science, International Software Systems Science · (April 2026 - April 2028)

Karachi University

Bachelor's degree, Computer Software Engineering · (January 2020 - December 2023)

BAMM PECHS Govt College for Women Karachi.

Intermediate, Pre-Engineering · (May 2017 - September 2019)
